CHEMICAL PEEL CONSENT

Most Patients experience no side effects from the superficial glycolic acid chemical peels, however, side effects may include:

- NEW ACNE ERUPTIONS
- STINGING
- ITCHING
- BURNING
- MILD SWELLING
- REDNESS
- TIGHTNESS
- SLIGHT SUPERFICIAL FLAKING/CRUSTING
- SCALING
- HERPES SIMPLEX (Only in patients with a past history)

These symptoms are temporary and will cease in a few days. Avoidance of any scrubs, acne medications, tretinoin, or peeling agents is advised while symptoms persist. Our office staff is available for all post peel concerns. If the doctor or patient feel there is a requirement, a follow up visit may be necessary.

I acknowledge my understanding of the above.

**For patients under the age of 18 yrs., a parent or guardian will need to be responsible for reading, acknowledging and signing for their child as well as being on the facility's premise during treatment(s).
