

## Current Clinical Trial Studies

July-August 2013

1. Laser assisted treatment for **axillary hyperhidrosis** (excessive sweating under the arms) research trial.
2. Long term safety trial of repeat administration of *topical Botulinum Toxin Type A* in a gel form for the treatment of **lateral canthal lines** (crow's feet).
3. Following the *PicoSure 755nm alexandrite laser's* approval for tattoo removal, SkinCare Research is performing a clinical study looking at **skin toning and treatment of epidermal pigmented lesions in Asian skin** as well as a second study looking at **epidermal and dermal pigmented lesions in non-Asian skin**.

### Upcoming:

1. Trial to reduce submental chin fat.
2. Study of people who suffer from redness along with rosacea acne.
3. Search for people who have a scheduled abdominoplasty.
4. Trial using a device that will "freeze" crow's feet lines.

**Please contact Kathleen Petrell, Clinical Research Manager at SkinCare Physicians, at 617-848-1638, if you or anyone you know may be interested in participating in one of the above trials.**
